

POOYA KARIMIAN

Phone: 778-317-4392 • URL: <http://pooyak.com/> • Email: me@pooyak.com • Twitter: [pooyak](#)

EDUCATION

M.Sc. in Computing Science, August 2007 • [Simon Fraser University](#), Canada

B.Sc. in Computer Engineering, September 2003 • [Sharif University of Technology](#), Iran

TECHNICAL SKILLS

Programming Languages: Objective-C, C / C++, Python, PHP / Perl, Java.

Web Development: HTML / CSS, JavaScript, Apache / Nginx, MySQL, XUL / Mozilla Platform.

Platforms: Mobile Dev: iOS / iPhone / iPad, Linux / System Administration, IP Networks.

Software Management: Git / GitHub, SVN, CVS, Bugzilla / Trac / JIRA.

Internationalization: Unicode, Bi-directional Text, Localization.

Academic Tools and Languages: Matlab, Prolog, LISP.

Computer Science: Algorithms, Databases, Distributed Computing.

Control and Electronics: Robotics and AI, Embedded systems, Communication, Verilog HDL.

PROFESSIONAL EXPERIENCES

2008-2011 Senior Software Developer - Web Developer § [Zite](#) (formerly Worio, Acquired by CNN)

- Zite: One of the only four developers of [Zite Personalized Magazine](#) for iPad. As the frontend lead, I designed and implemented the architecture of the iPad app, in near four months, using a hybrid of Objective-C, Javascript and HTML5 on the frontend and Python code on the web server side. Zite was an instant hit with [120k downloads](#) in just one week after its release. Since then, it has been constantly growing and getting featured in media. Turner/CNN [acquired Zite](#) in August 2011.
- Worio: Developing the web frontend and browser plugins for [Worio Discovery Engine](#): a tag-based search and recommendation service on top of web search. The server side web framework is a multithreaded and pipelined templating system that can start serving the page right away while the backend server is still busy generating the content for the page.

2007-2008 Software Developer § [Sxip Identity](#)

- Sxipper: A secure Identity and Password Manager as a browser add-on. [Sxipper](#) offered several features including managing passwords, filling forms, and providing [OpenID](#) inside a browser while collecting crowd-sourced training data for form filling. Coded using XUL, HTML and Javascript on top of Mozilla platform and occasional Perl code for server side.
- Sxip Social: A prototype for future of Sxipper as an identity manager and social assistant integrated into web browsing, developed in only one month. Consisted of Javascript crawlers and data storage inside the browser itself and UI to show the aggregate results based on the current website context.

2001-2004 System Developer § [Ghasedak Systems](#)

- Netbill: A multi ISP accounting and professional billing solution. [Netbill](#) is able to tolerate high load and large number of users and offers separate levels of resellers. Customizable at each level and is offered as a Linux-based appliance. Uses RADIUS AAA protocol, consisting of forking daemon, templatable web based interface and backend accounting database.
- Developing dynamic sites such as e-Shops and web portals mostly on Linux-Apache-MySQL-Perl platform.

2003-2004 Web Application Developer § [Iranian Fuel Conservation Organization \(Formerly IIEEO\)](#)

- Suppliers: Web-based application for managing and searching over resources and supplier companies.
- CNG Stations: Web-based application used by Compressed Natural Gas stations for daily reports of resources and usage data. Extensive data mining and graphical reports and features for nation-wide gas stations.

2001-2003 Web Application Developer § [AICTC](#), Sharif University of Technology

- PDM: A domain registration (DNS), management, monitoring and expiration alerting system.
- Automated News Portal: Content fetching and analysis from Internet news sources for a topic based news portal in entertainment and cinema news. In Perl and consisted of modular scrapers for each news source.
- Cabinet: Intranet file server and file search engine.

2003 Web Application Developer § [PeykAsa Group](#)

- The initial development of [Peykasa integrated messaging service](#) web interface, a web to SMS gateway.
- Web interface for Group SMS System.

2002-2003 Software Developer § **Olefin Group**, Chemical Engineering Dept., Tarbiat Modarres University

- Implementation of user interfaces for three chemical process simulators used to simulate chemical reactions in three major Iran petrochemical plants.
- Developing a service for scanning, categorizing and searching research papers. PC software directly interfacing with scanner and PHP/MySQL based software

1999-2003 Administrator § **Computer Engineering Department**, Sharif University of Technology

- Servers: Samba file server and file search. Simple CMS for handling web pages, web mail, course pages and user homepages.
- Workstations: Authentication and remote management of Windows machines used by near 1000 users on a Linux server using **Samba-TNG** as backend.

RESEARCH EXPERIENCES

2004-2006 Researcher § **Autonomy Lab.**, Simon Fraser University (Supervised by Dr. R.T. Vaughan)

- ChatterBox: A self-maintaining swarm of minimalist robots with audio communication.
- Sounds Good: Simulation and Evaluation of Audio Communication for Multi-Robot Exploration.
- Player/Stage: Open-Source and Free Software tools for robot control and simulation. Different features including an audio propagation simulator was implemented for this package. Developed on **SourceForge**.
- M.Sc. Thesis: Audio Communication for Multi-Robot Systems.

2005 Research Assistant § **Vision and Media Lab.**, Simon Fraser University (Supervised by Dr. G. Mori)

- Human Activity Recognition: Building systems that can find human figures in either still images or video sequences, and determine what action they are performing.

2001-2003 Research Assistant § **Robotics and Automation Lab.**, Sharif University of Technology

- Developing the vision system of Roboshark, a pool player robot (As part a of M.E. Alian M.Sc. Thesis. Supervised by Dr. S. Bagheri Shouraki and Dr. M.T. Manzuri).
- Member of **Sharif CESR** research group working on a small sized soccer playing robots team. Our research focused on different aspects of robotics: Image Processing and Machine Vision, Multi Object Tracking for fast moving objects, Path Planning, Pattern Matching, Simulation and Prediction, Noise Filtering, Multi Agent Systems, Network Communication, Decision Making, Neural Networks (Supervised by Dr. M.T. Manzuri).
- Participated in **Robocup** 2001, Seattle and Robocup 2002, Fokouka, Japan as a member of Sharif CESR team.
- Member of SharifII (ParsAI) research group working on a robot soccer simulation team. Our research focused on: Multi Agent Systems, Planning, Machine Learning, and Behavior Based Robot Simulation.

2002 Contestant § **First Sharif FPGA Design Contest**

- Design and Implementation of a Game Device: a game specific processor and graphics engine. Simulated and synthesized in Verilog HDL and implemented on an Altera FPGA.
- Awarded best technical report for design of “Standalone Gaming Machine”.
